

DevSecOps Intern

Build secure-by-default engineering systems. Automate security. Strengthen enterprise SaaS delivery.

Location	Duration	Function
Bangalore	6 to 12 months	Product Engineering / Cyber Security / Cloud Operations

About the Role

We are looking for an exceptionally driven **DevSecOps Intern** with a strong interest in software development, cloud platforms, cybersecurity, automation, and platform engineering. This is not a traditional internship. You will work alongside engineering, DevOps, and security teams to build secure-by-default CI/CD pipelines, automate security controls, integrate security testing into release processes, and strengthen the security posture of enterprise SaaS products.

The ideal candidate enjoys coding, breaking things responsibly, securing them, and automating everything possible.

Key Responsibilities

DevSecOps & Automation

- Build and enhance CI/CD pipelines with integrated security controls.
- Develop Python scripts and automation tools to improve operational efficiency.
- Automate vulnerability detection, reporting, remediation tracking, and compliance validation.
- Assist with Infrastructure as Code (IaC) implementation and security hardening.
- Build reusable automation modules for cloud and application security.

Application Security

- Integrate SAST, DAST, SCA, container security, and secrets scanning into the SDLC.
- Perform secure code reviews and validate identified vulnerabilities.
- Conduct security assessments of web applications, APIs, microservices, and cloud workloads.
- Support threat modelling and secure architecture reviews.

Cloud & Container Security

- Secure workloads deployed on AWS, Azure, or GCP.
- Implement security controls for Kubernetes and Docker environments.
- Assist with container image scanning and runtime security monitoring.
- Support cloud security posture management initiatives.

Monitoring & Incident Response

- Analyse security alerts generated by SIEM platforms and security tools.
- Investigate suspicious activity and support incident-response activities.
- Develop scripts for log collection, analysis, and correlation.
- Participate in security drills and cyber-resilience exercises.

Technical Skills Required

Programming Skills

- Strong exposure to **Python programming**.
- Ability to build automation scripts, REST API integrations, and security tooling.
- Understanding of data structures, algorithms, and object-oriented programming.
- Knowledge of Shell or Bash scripting is preferred.

Security Skills

- Understanding of the OWASP Top 10.
- Understanding of SAST, DAST, SCA, and vulnerability management.
- Knowledge of VAPT concepts and common attack vectors.
- Familiarity with authentication mechanisms such as OAuth, JWT, SAML, and MFA.

DevOps Skills

- Hands-on exposure to Git and platforms such as GitHub, GitLab, or Bitbucket.
- Familiarity with Jenkins, GitHub Actions, Azure DevOps, or similar CI/CD platforms.
- Understanding of Docker and Kubernetes fundamentals.
- Exposure to Infrastructure as Code tools such as Terraform or Ansible.

Cloud Skills

- Basic understanding of AWS, Azure, or GCP.
- Understanding of cloud networking, identity and access management, storage, and compute services.

Preferred Tool Exposure

• Burp Suite	• SonarQube	• Checkmarx
• Snyk	• Trivy	• OWASP ZAP
• Nessus	• Wireshark	• Splunk
• ELK Stack	• Terraform	• Kubernetes
• Docker	• Prometheus	• Grafana

Education

Pursuing or recently completed a **B.E., B.Tech, or MCA** in:

- Computer Science
- Information Technology
- Cyber Security
- Artificial Intelligence
- Data Science
- Software Engineering

Candidate Profile

A curious, hands-on learner who combines programming fundamentals with a security-first mindset and is eager to contribute to real-world cloud and product-engineering environments.
